

Lines & Angles

- corresponding \angle 's \rightarrow \angle 's in "same spot"

EX $\rightarrow \angle 1 + \angle 5, \angle 3 + \angle 7, \angle 2 + \angle 6, \angle 4 + \angle 8$

- alternate exterior \angle 's \rightarrow exterior \angle 's on opposite sides of transversal (NOT side-by-side!!!)

EX $\rightarrow \angle 1 + \angle 8, \angle 2 + \angle 7$

- alternate interior \angle 's \rightarrow interior \angle 's on opposite side of transversal (NOT side-by-side!!!)

EX $\rightarrow \angle 3 + \angle 6, \angle 4 + \angle 5$

- same-side interior \angle 's \rightarrow interior \angle 's on same side of transversal

EX $\rightarrow \angle 3 + \angle 5, \angle 4 + \angle 6$

- parallel lines \rightarrow never intersect, go in same direction

- If 2 lines are parallel, ...

\rightarrow Same-Side Int. \angle Postulate \Rightarrow ... then same-side interior \angle 's are supplementary

\rightarrow Alternate Interior \angle Theorem \Rightarrow ... then alternate interior \angle 's are congruent

\rightarrow Corresponding \angle Theorem \Rightarrow ... then corresponding \angle 's are congruent

\rightarrow Alternate Exterior \angle Theorem \Rightarrow ... then alternate exterior \angle 's are congruent

EX →

- $m\angle 1 = 123^\circ$
- $m\angle 2 = 57^\circ$
- $m\angle 3 = 123^\circ$
- $m\angle 4 = 123^\circ$

- $m\angle 5 = 57^\circ$
- $m\angle 6 = 57^\circ$
- $m\angle 7 = 123^\circ$

- What if we are trying to show lines are parallel?

→ Converse of SSI \angle Postulate \Rightarrow If SSI \angle 's are supplementary, then lines are \parallel

→ Converse of Alt. Int. \angle Thm. \Rightarrow If Alt. Int. \angle 's are \cong , then lines are \parallel

→ Converse of Alt. Ext. \angle Thm. \Rightarrow If Alt. Ext. \angle 's are \cong , then lines are \parallel

→ Converse of Corr. \angle 's Thm. \Rightarrow If Corr. \angle 's are \cong , then lines are \parallel

p. 144 → 21-24

HW: p. 153 → 7-9, 12-20

p. 161 → 12-16, 27, 28
